

Appendix 4.1 - CAP electronic Cancer Protocol

The College of American Pathologists (CAP) electronic Cancer Protocol (eCP) are a standardized list of common Question/Answer pairs used in reporting cancer surgical pathology data and were endorsed as a national standard by the Canadian Association of Pathologists on July 14, 2009. As of fiscal year 2010/11, CCO began implementing the CAP electronic Cancer Protocol (eCP) standard with hospitals across the province. Now that all participating hospitals have completed implementation, the latest CAP eCP release is mandated across Ontario. The list of mandated CAP Cancer Protocol (eCP) and Effective dates can be found in Appendix 4.1.

To date, CCO Pathology Laboratory Medicine Program mandated use of 6 CAP biomarker templates; which became available in the October 2013 (Lung & CRC), December 2013 (Breast), June 2014 (Gastric HER2), July 2015 (Melanoma Biomarker Template), and July 2016 (Endometrium: Biomarker Reporting Template).

*** The CUTANEOUS SQUAMOUS CELL CARCINOMA OF THE HEAD AND NECK Template is to be used for ALL RESECTABLE tumours.

For the time being, the CUTANEOUS SQUAMOUS CELL CARCINOMA OF THE HEAD AND NECK Template will be EXCLUDED from the OH Pathology

Data Quality metrics (Synoptic and Completeness rates).

Note: OH-CCO will continue to exclude ALL biopsy pathology reports (synoptic and/or narrative format) from the pathology data quality indicators available in iPortTM.

The following electronic Cancer Checklists are excluded from monthly reporting and are optional for use:

OH-CCO Monthly Synoptic DDF Reporting Inclusions

- All CAP mandated eCCs for malignant surgical resections (that are applicable to your site)
- In-situ resection reports for breast DCIS, urinary bladder, urethra and renal pelvis: ureter
- Benign/borderline resection reports for brain and spinal cord

OH-CCO Monthly Synoptic DDF Reporting Exclusions

- All other benign, borderline, in-situ or metastatic reports (ICDO-3 behavior codes 0, 1, 2 and 6 respectively), with the exception those listed under inclusions
- **All biopsy, autopsy, cytology, gynecological cytology biomarker and flow cytometry** reports will be electronically excluded if the hospital can send the correct report type in OBR 4
- All hematopoietic checklists (bone marrow, Hodgkin lymphoma, non-Hodgkin lymphoma)
- Consults completed on specimens from outside facilities
- *Reports where diagnosis of cancer is uncertain (sent for consult)
- *Squamous cell carcinoma cases where tumour thickness is <2cm (i.e. any squamous cell carcinoma less than pT2)
- *Re-excisions (except for re-excisions for melanoma and SCC of the skin which are required in DDF format using the appropriate eCCs)

*These are examples of the exclusions that the current CAP checklist DDF templates may not or cannot be appropriately utilized by the reporting pathologists and which CCO cannot electronically exclude from the Synoptic Pathology Reporting Indicator. These exclusions fall into the 10% window.
